

## PART 4 – PLAN REVIEW CROSSWALKS

This section contains blank Plan Review Crosswalks for Standard State Hazard Mitigation Plans, Enhanced State Hazard Mitigation Plans, and Local Hazard Mitigation Plans. Plan writers and reviewers working on Standard State Hazard Mitigation Plans will need the Standard State Hazard Mitigation Plan Review Crosswalk. An Enhanced State Plan requires the Review Crosswalk for the Standard State Plan **and** the Enhanced State Hazard Mitigation Plan Review Crosswalk. Those working on Local Mitigation Plans will use the Local Hazard Mitigation Plan Review Crosswalk.

Each section of the Plan Review Crosswalk is introduced by language from the Rule, stating the plan requirements. The first column, headed “**Element**,” breaks down the requirements into their individual provisions, rephrasing them as questions. The second column, headed “**Location in the Plan**,” is for indicating where in the plan the element is addressed. The third column, headed “**Reviewer’s Comments**,” is for indicating whether or not the plan has addressed the requirement satisfactorily and any recommended required improvements.

Except for prerequisites, which are scored as “Not Met” or “Met,” the reviewer will score each element as an N for “Needs Improvement” or S for “Satisfactory,” checking off the appropriate box under “**Score**.” Any element that receives an N will result in an N summary score for the requirement as a whole. At the end of the plan review, reviewers can fill out the Plan Summary Worksheet to easily present the results on one page.

For ease of use or expanding the space available for comments, these crosswalks can be downloaded off the FEMA Mitigation Planning Web site.
