CODE ANALYSIS

Project Description
This proposed project is a **Change of Use** to an existing previously occupied building with a current or past Certificate of Occupancy issued by the Authority Having Jurisdiction (AHJ).

An addition to the existing structure is proposed. The existing building is in a Flood Hazard Area, and is **not** Historic.

This proposed project consists of the addition of a second floor and new gable roof onto an existing one story residential outbuilding structure. The second floor will be primarily wood framing, wood stud walls and a wood truss roof. The building foundation, structure and exterior finishes are to remain as existing. The interstitial floors and roofs are to remain as existing. The work area under this permit is for the east wing only. The first floor has minor demolition and primary work includes constructing a new lift and new foundation walls. The second floor renovation includes construction of 3 bedroom suites and a shared kitchen/laundry.

Accessibility (VECB Chapter 4 & VCC Chapter 11):
1. Where proposed Alterations affect the area(s) of the primary function, the route to the primary function is made accessible and includes toilet facilites and drinking fountains as required by Chapter 11 of the VCC.
   A. Per Section 1107.6.2.2.1 No Type A units are required because we have less than 20 units on the site.
   B. Per Section 1107.6.2.2.2 No Type B units are required because we have less than 4 units per building.
2. The costs of providing the accessible route are not required to exceed 20 percent of the costs of the alterations affecting the area(s) of primary function. Those proposed improvements are:
   a. Parking improvements (including signage).
   b. Exterior sidewalk improvements.
   c. Construction of accessible ramps to first floor.
   d. Primary public entrance and exit doorways.

Additions (VEBC Chapter 8):
1. The proposed Addition does not increase the total allowable building beyond the permitted provisions of VCC Chapter 5. See summary above.

Fire and Smoke Protection Features (VCC Chapter 7): None.

Interior Finishes (VCC Chapter 8): None.

Fire Protection Systems (VCC Chapter 9):
1. An Automatic Fire Sprinkler System **is not required to** be provided throughout building per VCC Section 903.2.8 Exception 2.
   A. Section 903.2.8 states where necessary water pressure or volume or both for system is not available, a sprinkler is not required if dwelling units are not more than two stories above level of exit discharge and if a two-hour fire barrier is provided between each pair of dwelling units.
2. A Class I standpipe is **not** required per VCC Section 905 (2-story building, fully sprinklered, 2nd Floor less than 35' above grade).
3. An approved Fire Alarm and Detection System **is required to** be provided throughout the building per VCC Section 907.2.9.1 Activation of the fire alarm system shall initiate an emergency voice/alarm communications system per VCC Section 907.5, installed in accordance with National Fire Prevention Code (NFPA) 72.

Means of Egress (VCC Chapter 10):
Refer to the Life Safety Plan(s) for the design occupant load tabulation based on the Maximum Floor Area Allowances Per Occupant (Table 1004.1.2).

2. Per Section 701.2, compliance with the current VCC is required for any repairs, alterations, or additions undertaken in connection with the proposed change of occupancy.
3. The proposed change of occupancy is **not** a special use or occupancy and is **not** an incidental use as identified by VCC Chapter 4 or VCC Table 509 respectively.
4. Per Section 703.1, interior finishes of walls and ceilings shall comply with VCC Chapter 8 in areas undergoing the change of occupancy. Corridors, and enclosure for exit access stairways, ramps, interior exit stairways and passge ways = Class B
   Rooms and enclosed spaces = Class C
5. Per Sections 704.2 and 704.3, Section 903 of the VCC will govern the requirement or lack thereof of an automatic fire suppression system. See Fire Protection Systems above.
